

## 5.2 all\_differ\_from\_at\_least\_k\_pos

	DESCRIPTION	LINKS	GRAPH
<b>Origin</b>	Inspired by [177].		
<b>Constraint</b>	<code>all_differ_from_at_least_k_pos(K, VECTORS)</code>		
<b>Type</b>	VECTOR : <code>collection</code> (var-dvar)		
<b>Arguments</b>	K : <code>int</code> VECTORS : <code>collection</code> (vec - VECTOR)		
<b>Restrictions</b>	<code>required</code> (VECTOR, var) $ \text{VECTOR}  \geq 1$ $ \text{VECTOR}  \geq K$ $K \geq 0$ <code>required</code> (VECTORS, vec) <code>same_size</code> (VECTORS, vec)		
<b>Purpose</b>	Enforce all pairs of distinct vectors of the VECTORS collection to differ from at least K positions.		
<b>Example</b>	<code>(2, (vec - (2, 5, 2, 0), vec - (3, 6, 2, 1), vec - (3, 6, 1, 0)))</code>		
	<p>The <code>all_differ_from_at_least_k_pos</code> constraint holds since:</p> <ul style="list-style-type: none"> <li>• The first and second vectors differ from 3 positions, which is greater than or equal to <math>K = 2</math>.</li> <li>• The first and third vectors differ from 3 positions, which is greater than or equal to <math>K = 2</math>.</li> <li>• The second and third vectors differ from 2 positions, which is greater than or equal to <math>K = 2</math>.</li> </ul>		
<b>Typical</b>	$K > 0$ $ \text{VECTORS}  > 1$		
<b>Symmetries</b>	<ul style="list-style-type: none"> <li>• Items of VECTORS are <code>permutable</code>.</li> <li>• Items of VECTORS.vec are <code>permutable</code> (<i>same permutation used</i>).</li> </ul>		
<b>Arg. properties</b>	<ul style="list-style-type: none"> <li>• <code>Contractible</code> wrt. VECTORS.</li> <li>• <code>Extensible</code> wrt. VECTORS.vec (<i>add items at same position</i>).</li> </ul>		
<b>See also</b>	<p><b>implied by:</b> <code>all_differ_from_exactly_k_pos</code> (<math>\geq K</math> replaced by <math>= K</math>).</p> <p><b>part of system of constraints:</b> <code>differ_from_at_least_k_pos</code>.</p> <p><b>used in graph description:</b> <code>differ_from_at_least_k_pos</code>.</p>		

**Keywords**            **application area:** bioinformatics.  
                         **characteristic of a constraint:** disequality, vector.  
                         **constraint type:** system of constraints, decomposition.  
                         **final graph structure:** no loop, symmetric.

**Cond. implications**    `all_differ_from_at_least_k_pos(K, VECTORS)`  
                                 with  $K \leq |\text{VECTORS}|$   
                                 **implies** `atleast_nvector(NVEC, VECTORS)`.

<b>Arc input(s)</b>	VECTORS
<b>Arc generator</b>	$\text{CLIQUE}(\neq) \mapsto \text{collection}(\text{vectors1}, \text{vectors2})$
<b>Arc arity</b>	2
<b>Arc constraint(s)</b>	$\text{differ\_from\_at\_least\_k\_pos}(K, \text{vectors1.vec}, \text{vectors2.vec})$
<b>Graph property(ies)</b>	$\text{NARC} =  \text{VECTORS}  *  \text{VECTORS}  -  \text{VECTORS} $
<b>Graph class</b>	<ul style="list-style-type: none"> <li>• NO_LOOP</li> <li>• SYMMETRIC</li> </ul>

**Graph model**

The **Arc constraint(s)** slot uses the `differ_from_at_least_k_pos` constraint defined in this catalogue.

Parts (A) and (B) of Figure 5.2 respectively show the initial and final graph associated with the **Example** slot. Since we use the **NARC** graph property, the arcs of the final graph are stressed in bold. The previous constraint holds since exactly  $3 \cdot (3 - 1) = 6$  arc constraints hold.

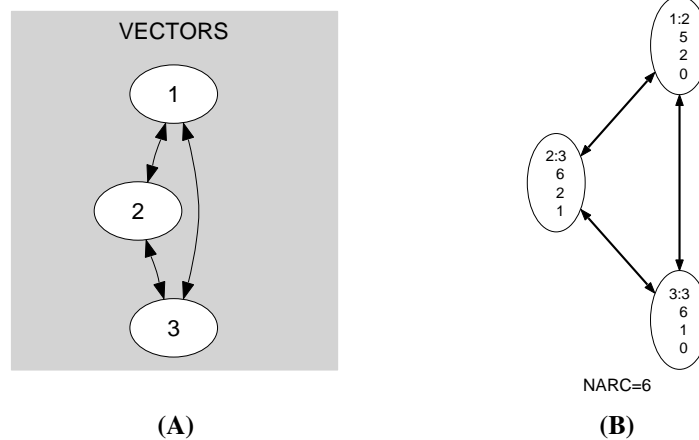

Figure 5.2: Initial and final graph of the `all_differ_from_at_least_k_pos` constraint

**Signature**

Since we use the  $\text{CLIQUE}(\neq)$  arc generator on the items of the `VECTORS` collection, the expression  $|\text{VECTORS}| \cdot |\text{VECTORS}| - |\text{VECTORS}|$  corresponds to the maximum number of arcs of the final graph. Therefore we can rewrite the graph property  $\text{NARC} = |\text{VECTORS}| \cdot |\text{VECTORS}| - |\text{VECTORS}|$  to  $\text{NARC} \geq |\text{VECTORS}| \cdot |\text{VECTORS}| - |\text{VECTORS}|$ . This leads to simplify  $\overline{\text{NARC}}$  to  $\overline{\text{NARC}}$ .
