

## 5.63 change\_pair

	DESCRIPTION	LINKS	GRAPH	AUTOMATON
<b>Origin</b>	Derived from <a href="#">change</a> .			
<b>Constraint</b>	<code>change_pair(NCHANGE, PAIRS, CTRX, CTRY)</code>			
<b>Arguments</b>	<pre> NCHANGE  : dvar PAIRS    : collection(x-dvar, y-dvar) CTRX     : atom CTRY     : atom </pre>			
<b>Restrictions</b>	$NCHANGE \geq 0$ $NCHANGE <  PAIRS $ <code>required(PAIRS, [x, y])</code> $CTRX \in [=, \neq, <, \geq, >, \leq]$ $CTRY \in [=, \neq, <, \geq, >, \leq]$			
<b>Purpose</b>	<p><math>NCHANGE</math> is the number of times that the following disjunction holds: <math>(X_1 \text{ CTRX } X_2) \vee (Y_1 \text{ CTRY } Y_2)</math>, where <math>(X_1, Y_1)</math> and <math>(X_2, Y_2)</math> correspond to consecutive pairs of variables of the collection <math>PAIRS</math>.</p>			
<b>Example</b>	$ \left(  \begin{array}{ll} x - 3 & y - 5, \\ x - 3 & y - 7, \\ x - 3 & y - 7, \\ x - 3 & y - 8, \\ 3, \left\langle \begin{array}{ll} x - 3 & y - 4, \\ x - 3 & y - 7, \\ x - 1 & y - 3, \\ x - 1 & y - 6, \\ x - 1 & y - 6, \\ x - 3 & y - 7 \end{array} \right\rangle, \neq, > \end{array} \right) $			
	<p>In the example we have the following 3 changes:</p> <ul style="list-style-type: none"> <li>• One change between pairs <math>x - 3 y - 8</math> and <math>x - 3 y - 4</math> since <math>3 \neq 3 \vee 8 &gt; 4</math>,</li> <li>• One change between pairs <math>x - 3 y - 7</math> and <math>x - 1 y - 3</math> since <math>3 \neq 1 \vee 7 &gt; 3</math>,</li> <li>• One change between pairs <math>x - 1 y - 6</math> and <math>x - 3 y - 7</math> since <math>1 \neq 3 \vee 6 &gt; 7</math>.</li> </ul> <p>Consequently the <code>change_pair</code> constraint holds since its first argument <math>NCHANGE</math> is assigned value 3.</p>			
<b>Typical</b>	$NCHANGE > 0$ $ PAIRS  > 1$ <code>range(PAIRS.x) &gt; 1</code> <code>range(PAIRS.y) &gt; 1</code>			

**Symmetries**

- One and the same constant can be [added](#) to the `x` attribute of all items of PAIRS.
- One and the same constant can be [added](#) to the `y` attribute of all items of PAIRS.

**Arg. properties**

[Functional dependency](#): NCHANGE determined by PAIRS, CTRX and CTRY.

**Usage**

Here is a typical example where this constraint is useful. Assume we have to produce a set of cables. A given quality and a given cross-section that respectively correspond to the `x` and `y` attributes of the previous pairs of variables characterise each cable. The problem is to sequence the different cables in order to minimise the number of times two consecutive wire cables  $C_1$  and  $C_2$  verify the following property:  $C_1$  and  $C_2$  do not have the same quality or the cross section of  $C_1$  is greater than the cross section of  $C_2$ .

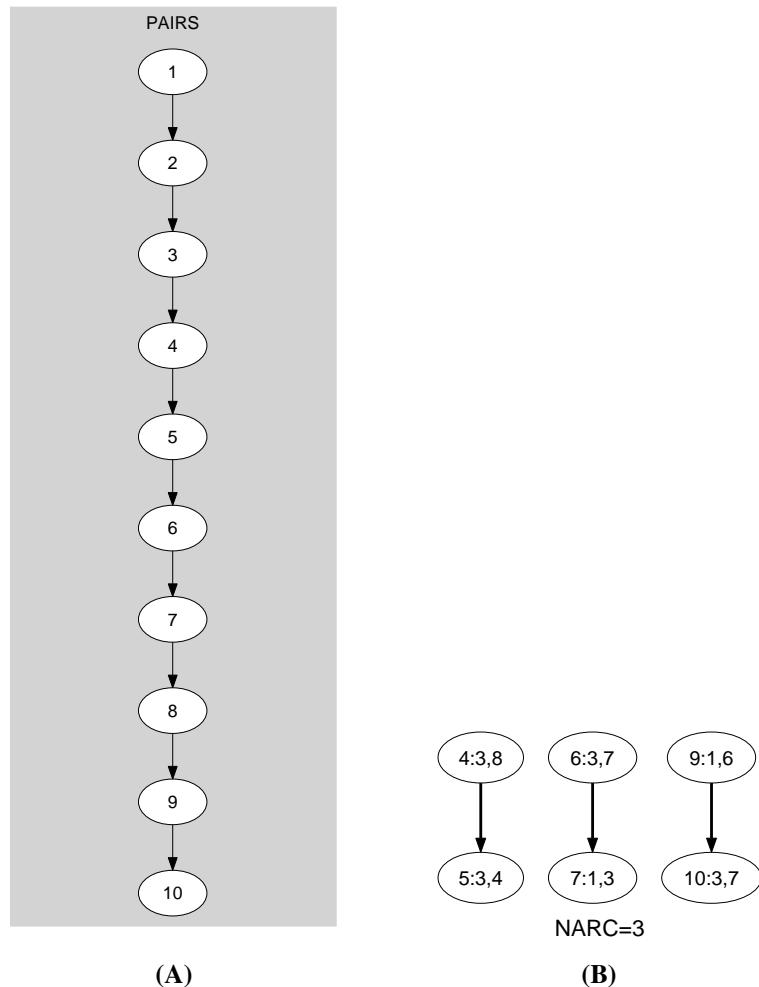

**See also**

[generalisation](#): `change_vectors` (*pair of variables replaced by vector*).  
[specialisation](#): `change` (*pair of variables replaced by variable*).

**Keywords**

[characteristic of a constraint](#): pair, automaton, automaton with counters.  
[constraint arguments](#): pure functional dependency.  
[constraint network structure](#): sliding cyclic(2) constraint network(2).  
[constraint type](#): timetabling constraint.  
[final graph structure](#): acyclic, bipartite, no loop.  
[modelling](#): number of changes, functional dependency.

<b>Arc input(s)</b>	PAIRS
<b>Arc generator</b>	$PATH \mapsto \text{collection}(\text{pairs1}, \text{pairs2})$
<b>Arc arity</b>	2
<b>Arc constraint(s)</b>	$\text{pairs1.x CTRX pairs2.x} \vee \text{pairs1.y CTRY pairs2.y}$
<b>Graph property(ies)</b>	<b>NARC</b> = NCHANGE
<b>Graph class</b>	<ul style="list-style-type: none"> <li>• ACYCLIC</li> <li>• BIPARTITE</li> <li>• NO_LOOP</li> </ul>
<b>Graph model</b>	<p>Same as <b>change</b>, except that each item has two attributes <b>x</b> and <b>y</b>.</p> <p>Parts (A) and (B) of Figure 5.158 respectively show the initial and final graph associated with the <b>Example</b> slot. Since we use the <b>NARC</b> graph property, the arcs of the final graph are stressed in bold.</p>

**Automaton**

Figure 5.159 depicts the automaton associated with the `change_pair` constraint. To each pair of consecutive pairs  $((X_i, Y_i), (X_{i+1}, Y_{i+1}))$  of the collection PAIRS corresponds a 0-1 signature variable  $S_i$ . The following signature constraint links  $X_i, Y_i, X_{i+1}, Y_{i+1}$  and  $S_i$ :  $(X_i \text{ CTRX } X_{i+1}) \vee (Y_i \text{ CTRY } Y_{i+1}) \Leftrightarrow S_i$ .
