5.120 diffn_include

	DESCRIPTION LINKS GRAPH
Origin	CHIP: option guillotine cut (include) of diffn.
Constraint	diffn_include(ORTHOTOPES,DIM)
Туре	ORTHOTOPE : collection(ori-dvar, siz-dvar, end-dvar)
Arguments	ORTHOTOPES:collection(orth - ORTHOTOPE)DIM:int
Restrictions	$\begin{split} \texttt{ORTHOTOPE} &> 0 \\ \textbf{require_at_least}(2, \texttt{ORTHOTOPE}, [\texttt{ori}, \texttt{siz}, \texttt{end}]) \\ \texttt{ORTHOTOPE.siz} &\geq 0 \\ \texttt{ORTHOTOPE.ori} &\leq \texttt{ORTHOTOPE.end} \\ \textbf{required}(\texttt{ORTHOTOPES}, \texttt{orth}) \\ \textbf{same_size}(\texttt{ORTHOTOPES}, \texttt{orth}) \\ \texttt{DIM} &> 0 \\ \texttt{DIM} &\leq \texttt{ORTHOTOPE} \\ \texttt{diffn}(\texttt{ORTHOTOPES}) \end{split}$
Purpose	 Extension of the generalised multi-dimensional non-overlapping diffn constraint. Holds if, for each pair of orthotopes (O₁, O₂) the following conditions hold: O₁ and O₂ do not overlap. Two orthotopes do not overlap if one of the orthotopes has zero size or if there exists at least one dimension where their projections do not overlap. Let P₁ and P₂ respectively denote the projections of O₁ and O₂ onto dimension DIM. If P₁ and P₂ overlap then, either P₁ is included in P₂, either P₂ is included in P₁.
Example	$\left(\begin{array}{c} {\rm orth} - \left< {\rm ori} - 8 \; {\rm siz} - 1 \; {\rm end} - 9, {\rm ori} - 4 \; {\rm siz} - 1 \; {\rm end} - 5 \right>,} \\ {\rm orth} - \left< {\begin{array}{c} {\rm ori} - 9 \; {\rm siz} - 1 \; {\rm end} - 10,} \\ {\rm ori} - 4 \; {\rm siz} - 3 \; {\rm end} - 7 \end{array} \right>,} \\ {\rm orth} - \left< {\rm ori} - 6 \; {\rm siz} - 3 \; {\rm end} - 7 \right>,} \\ {\rm orth} - \left< {\rm ori} - 6 \; {\rm siz} - 3 \; {\rm end} - 9, {\rm ori} - 5 \; {\rm siz} - 2 \; {\rm end} - 7 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 3 \; {\rm end} - 4, {\rm ori} - 6 \; {\rm siz} - 1 \; {\rm end} - 7 \right>,} \\ {\rm orth} - \left< {\rm ori} - 4 \; {\rm siz} - 2 \; {\rm end} - 6, {\rm ori} - 3 \; {\rm siz} - 4 \; {\rm end} - 7 \right>,} \\ {\rm orth} - \left< {\rm ori} - 6 \; {\rm siz} - 4 \; {\rm end} - 10,} \\ {\rm orth} - \left< {\rm ori} - 6 \; {\rm siz} - 1 \; {\rm end} - 2 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 1 \; {\rm end} - 2 \right>,} \\ {\rm orth} - \left< {\rm ori} - 6 \; {\rm siz} - 5 \; {\rm end} - 11,} \\ {\rm ori} - 2 \; {\rm siz} - 2 \; {\rm end} - 4 \right>,} \\ {\rm orth} - \left< {\rm ori} - 6 \; {\rm siz} - 2 \; {\rm end} - 4 \right>,} \\ {\rm orth} - \left< {\rm ori} - 6 \; {\rm siz} - 2 \; {\rm end} - 4 \right>,} \\ {\rm orth} - \left< {\rm ori} - 6 \; {\rm siz} - 2 \; {\rm end} - 4 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 1 \; {\rm end} - 2 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 2 \; {\rm end} - 4 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 2 \; {\rm end} - 4 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 2 \; {\rm end} - 4 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 2 \; {\rm end} - 4 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 2 \; {\rm end} - 4 {\rm ori} - 3 \; {\rm siz} - 2 \; {\rm end} - 5 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 2 \; {\rm end} - 4 {\rm ori} - 3 \; {\rm siz} - 2 \; {\rm end} - 5 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 2 \; {\rm end} - 3 {\rm ori} - 5 \; {\rm siz} - 1 \; {\rm end} - 5 \right>,} \\ {\rm orth} - \left< {\rm ori} - 1 \; {\rm siz} - 2 \; {\rm end} - 3 {\rm ori} - 5 \; {\rm siz} - 1 \; {\rm end} - 6 \right>,} \end{array} \right)$

Figure 5.270 represents the respective position of the twelve rectangles of the example. The coordinates of the leftmost lowest corner of each rectangle are stressed in bold. The diffn_include constraint holds since (1) the twelve rectangles do not overlap and since (2) when their projection onto dimension DIM = 1 overlap one of the projections is included within the other one.

projections of the rectangles onto dimension 1

Figure 5.270: Illustration of the **Example** slot: twelve non-overlapping rectangles such that, for each pair of rectangles R_i , R_j $(1 \le i < j \le 12)$, if the projections onto dimension 1 of rectangles R_i and R_j intersect then one of the projections is included within the other projection

Typical	$\begin{split} \texttt{ORTHOTOPE} &> 1 \\ \texttt{ORTHOTOPE.siz} &> 0 \\ \texttt{ORTHOTOPES} &> 1 \end{split}$
Symmetries	 Items of ORTHOTOPES are permutable. One and the same constant can be added to the ori and end attributes of all items of ORTHOTOPES.orth.
Arg. properties	Contractible wrt. ORTHOTOPES.
See also	common keyword: diffn(geometrical constraint, orthotope), diffn_column(geometrical constraint, orthotope, positioning constraint).

$\overline{\mathbf{NARC}}, \mathit{CLIQUE}(<)$

implied by: diffn_column.
used in graph description: two_orth_column.

 Keywords
 constraint type: decomposition.

 geometry: geometrical constraint, positioning constraint, orthotope.

Arc input(s)	ORTHOTOPES
Arc generator	$CLIQUE(<) \mapsto \texttt{collection}(\texttt{orthotopes1}, \texttt{orthotopes2})$
Arc arity	2
Arc constraint(s)	$\verb+two_orth_include(orthotopes1.orth, orthotopes2.orth, DIM)$
Graph property(ies)	$\mathbf{NARC} = \mathbf{ORTHOTOPES} * (\mathbf{ORTHOTOPES} - 1)/2$

Graph model Since showing all items produces too big graphs, parts (A) and (B) of Figure 5.271 respectively show the initial and final graph associated with the first three items of the **Example** slot. Since we use the **NARC** graph property, the arcs of the final graph are stressed in bold.

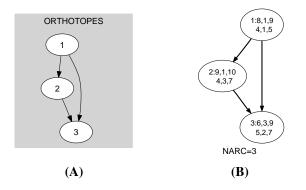

Figure 5.271: Initial and final graph of the diffn_include constraint
